Mark scheme

June 2023

Version: 1.0 Final

`

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

M	Method marks are awarded for a correct method which could lead to a correct answer.
A	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
B	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
M dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent. eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a $\leqslant$ value < b
3.14 …	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles.

Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

Work not replaced

Erased or crossed out work that is still legible should be marked.

Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

Continental notation

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

	$\sqrt{(\text{their } 86.8(...))^2 - 46^2}$ or $\sqrt{5418.(...)}$ or their 86.8(…) × sin 58 or their 86.8(…) × cos 32	M1dep	oe
	[73.6, 74]	A1	
	Additional Guidance		
	Do not accept scale drawing		
	Answer 73 after answer in range seen		M1M1A1
	$\dfrac{\sin 32}{46} = \dfrac{\sin 58}{x}$		M1

Q	Answer	Mark	Comments
24(a)	8 or 10	M1	8 may be implied by 2^2 or 4
	8 and 10 and $\frac{1}{40}$ or 0.025	A1	8 may be implied by 2^2 or 4 accept 0.03 with $\frac{1}{40}$ or 0.025 seen

Additional Guidance	
Do not allow exact calculations for M1A1 eg $4.113 = 4$ and $10.21 = 10$ and $\frac{1}{40}$	M1A0
$\frac{1}{40}$ or 0.025 with 8 or 10 seen (8 may be implied by 2^2 or 4)	M1A0
$\frac{1}{40}$ or 0.025 without 8 or 10 seen (8 may be implied by 2^2 or 4)	M0A0

Q	Answer	Mark	Comments
24(b)	Valid explanation	B1	eg both numbers have been rounded down
	Additional Guidance		
	Ignore irrelevant reasons alongside a correct reason, unless contradictory		
	Ignore a calculation using exact values alongside a correct reason eg 0.025 is greater than 0.0238… and both numbers rounded down	B1	
	0.025 is greater than 0.0238…	B0	
	The denominator is smaller	B1	
	The denominator using the exact values is bigger	B1	
	(Decimals) rounded down	B1	
	Because 8.34 is more than 8 and 10.21 is more than 10	B1	
	One is divided by less (with answer more)	B1	
	Estimating rounds the numbers down which makes the denominator less	B1	
	Estimating rounds the numbers down which makes it less	B0	
	Because it rounds up	B0	
	Because she rounded each number to one significant figure	B0	
	The numbers get rounded up so more than the exact value	B0	
	Rounded up when estimating	B0	
	Removing the decimals makes the number bigger	B0	

Q	Answer	Mark	Comments
25(a)	$(x + 3)(x + 5)$	B2	either order B1 $(x + a)(x + b)$ where $ab = 15$ or $a + b = 8$

	Additional Guidance	
	Accept $1x$ for x throughout	
	$(3 + x) \times (x + 5)$	B2
	Condone missing final bracket eg $(5 + x)(3 + x$	B2
	Ignore any attempt to solve $(x + 3)(x + 5) = 0$ eg $(x + 3)(x + 5)$ followed by $x = 3$, $x = 5$	B2

Q	Answer	Mark	Comments
25(b)	$(y =) –2$ $(y =) 4$	B1	either order

	Additional Guidance	
	Accept any letter eg $x = –2$ $x = 4$	B1
	$–2$ and 4 on the answer line	B1
	$–2$ and 4 written separately in the stem unless contradicted by answer line	B1
	$–2$ and 4 written with $(–2 + 2)(4 – 4)$ unless contradicted by answer line	B1
	$(–2 + 2)(4 – 4)$ on answer line	B0
	$(–2 + 2)(4 – 4)$ even if $–2$ and 4 circled or indicated as the embedded values	B0
